➤ “RTSoft” Implements Alcohol Fiscal Metering Complexes

Since 2007, “RTSoft” company has taken part in the federal program aimed to equip companies producing alcohol-containing products with complexes for computer-based metering and information transferring to the United Federal Automated Informational System (EGAIS). More than 20 contracts have been concluded currently to deliver complexes for alcohol concentration fiscal metering and complexes for anhydrous alcohol fiscal metering. These complexes are intended for use at distilling industry and liquor enterprises to measure the anhydrous alcohol by volume in alcohol products.

The complex for fiscal metering of anhydrous alcohol concentration and volume in a product could be used in distillers and rectifying units, in alcohol cellars, in receiving and storage sections and others.

There are an estimator and primary transducers measuring dehydrated alcohol in liquid substances. The estimator is constructed on the base of a high-speed specialized “Compact PCI” computer operating in real-time system made by “Kontron” company. Mass flow meters are used as primary transducers in the complex.

All the main components used in the complex have got certificates issued by GosStandart of Russia, are listed in the State Register and has got the permit for operation at hazardous industrial facilities issued by the Federal Service of Technological Inspectorate of Russia (Gosgortekhnadzor of Russia).
